

→ DECOMMISSIONING OF ENERGY ASSETS POWERED BY SPACE

Funding up to €200K per Activity
Opens 2nd Quarter of 2020

→ DECOMMISSIONING OF ENERGY ASSETS POWERED BY SPACE

The European Space Agency is offering technical support and funding to companies developing innovative products and services that:

- address the decommissioning or the reuse of energy assets, like offshore oil & gas platforms and wind farms;
- aim at minimizing environmental and economic impacts caused by energy infrastructure decommissioning;
- benefit from one or more space assets (including Satnav, SatCom and EO). The space assets shall represent a clear added value for the considered services and do not need to be limited to ESA's or European Space assets.

The following scenarios have been identified as key focus areas:

- Monitoring of environmental impact
- Support to waste management processes
- Logistics and end-to-end business support services
- Support to automation of decommissioning activities
- Use of innovative space-enabled technology to support logistics and ensure safety of operations
